The description of btrfs "Journaling filesystem with snapshots and support for RAID and device-mapper" sounds cool... but then how do I have RAID and device-mapper? hi all hi !test | Somsip Somsip: Testing... Testing... 1. 2.. 3... (by the way, remember that you can use /join #test) 0.0.0.0 is not blocked, is there any other one? Hello, I am having trouble getting my email to go through. I have tried changing my settings on my servers, but my email server keeps rejecting my emails. I have finally gotten it to send an email, but when i check the mail it says it cannot be delivered. I have an IP. pfifo: I found a file with ip_conntrack.ko - is that for my problem? t3kuber: #ubuntu-server ok thanks LeMike: yes, it is for the same issue. you probably need to recompile with better conntrack support LeMike: sudo modprobe ip_conntrack pfifo: no errors or anything. and it worked! LeMike: yes, but you still need to recompile LeMike: what are you trying to do? pfifo: I want to activate fast user switching pfifo: and I want to make a free NTFS file system for my laptop for such things I am using Ubuntu Gnome 16.04

LTS, and my laptop screen brightness is not working properly, when i use ubuntu gnome 16.04 LTS then my screen is not properly visible and its brightness is very low, i can't see anything, but when i am using ubuntu 16.04 LTS then brightness of screen is ok, i have disabled power off on screen pfifo: to enable fast user switching. pfifo: any recommendations? pfifo
